## Mathematics Examples

Leonardo García

February 16, 2018

Attempt to reproduce the equations in this document! You may need to look at the examples given in the links on the course page entitled Mathematics — More.

#### 1 The math environment

Here are some straightforward examples:  $y = x^2$ ,  $y = \sin x$ .

### 2 The displaymath environment

Three examples:

$$\frac{x}{y} = z$$

$$\left(\frac{x}{y} + 3\right) = z$$

And now a harder one:

$$t = \frac{X_1 - X_2}{\sqrt{\mathcal{P}\left(\frac{1}{n_1} + \frac{1}{n_2}\right)}}.$$

### 3 The equation environment

Derivatives and greek letters:

$$\epsilon \frac{\mathrm{d}^2 \psi}{\mathrm{d}t^2} = -\psi. \tag{1}$$

# 4 Fine points

The first version is just plain wrong; the second is suitable for publication:

$$\log y = \int_0^\infty \sin x dx$$

$$\log y = \int_0^\infty \sin x \, \mathrm{d}x$$
